

Anglian Water – Additional Policy 5 Response following submission of EXAM42-44

In summary, most Councils have adopted a 110l/p/d policy or better standard given the Environment Agency's designation of the Anglian and wider region as seriously water stressed. We are now working with a number of Councils considering higher water efficiency standards ranging from 80 to 100l/p/d in order to address climate change adaptation and local abstraction reductions designed to protect water quality and biodiversity.
